

May 7, 2014

Please accept this letter from the signed organizations and residents supporting the Environmental Protection Agency's proposed cleanup plan for the lower Passaic River. In an effort to remediate the highly toxic Passaic River, on April 11th, the EPA released its Focused Feasibility Study and proposed cleanup plan for the lower eight miles of the River.

The Ei'A's preferred cleanup method consists of bank-to-bank dredging of 4.3 million cubic yards of the lower 8.3 miles of the River, with a two-foot cap and off-site disposal of contaminated sediment. This cleanup and disposal method will be beneficial with respect to long term effectiveness, will reduce toxicity, ecological impacts, and risk to human health. We believe this plan will result in a clean and healthy river.

This bank-to-bank cleanup will deliver environmental and economic benefits to the communities surrounding the River for generations to come.

We are eager to be a part of the solution that reclaims the Passaic River for our region. Together, we support EPA's proposed cleanup plan and call on the polluters to pay for a full clean up that OUR communities deserve and demand!

Thank you.

Sincerely,

Dina Castro

Favor de recibir esta carta, firmada por las organizaciones y residentes que apoyan el plan presentada por la Agencia de Protección Ambiental (EPA) para la limpieza del segmento más bajo del Río Passiac. El 11 de abril, como parte de sus esfuerzos para remediar el tóxico Río Passaic, la EPA lanzó su Estudio Enfocado sobre la Viabilidad, así como su propuesta para la limpieza de los 13 kilómetros más bajos del río.

Para la EPA, el método preferido para la limpieza consiste en dragar de una orilla a la otra, una distancia de 3.9 millones de metros cúbicos en los 13.4 kilómetros más bajos del río, y tapar el fondo con una capa de 0.61 metros de profundidad. Los sedimentos contaminados serán transportados a un sitio lejos de la comunidad. La limpieza y el método de desechar de los sedimentos tóxicos serán benéficos con respecto a la eficaz de largo plazo. Reducirán el nivel de toxicidad y los impactos ecológicos y el riesgo a la salud humana. Creemos que este plan resultará en un río sano.

Una limpieza de orilla a orilla traerá beneficios ambientales y económicos a las comunidades ubicadas cerca al río para las generaciones venideras.

Estamos anciosos por ser parte de la solución para recuperar el Río Passaic para nuestra región. Juntos, apoyamos la propuesta de la EPA para la limpieza y hacemos un llamamiento para que los que contaminaron el río paguen para una limpieza completa, consecuente con lo que NUESTRAS comunidades merecen y exigen!

Gracias.

Atentamente,
